# AWS Funding Programs: Decision Framework

## How the framework works

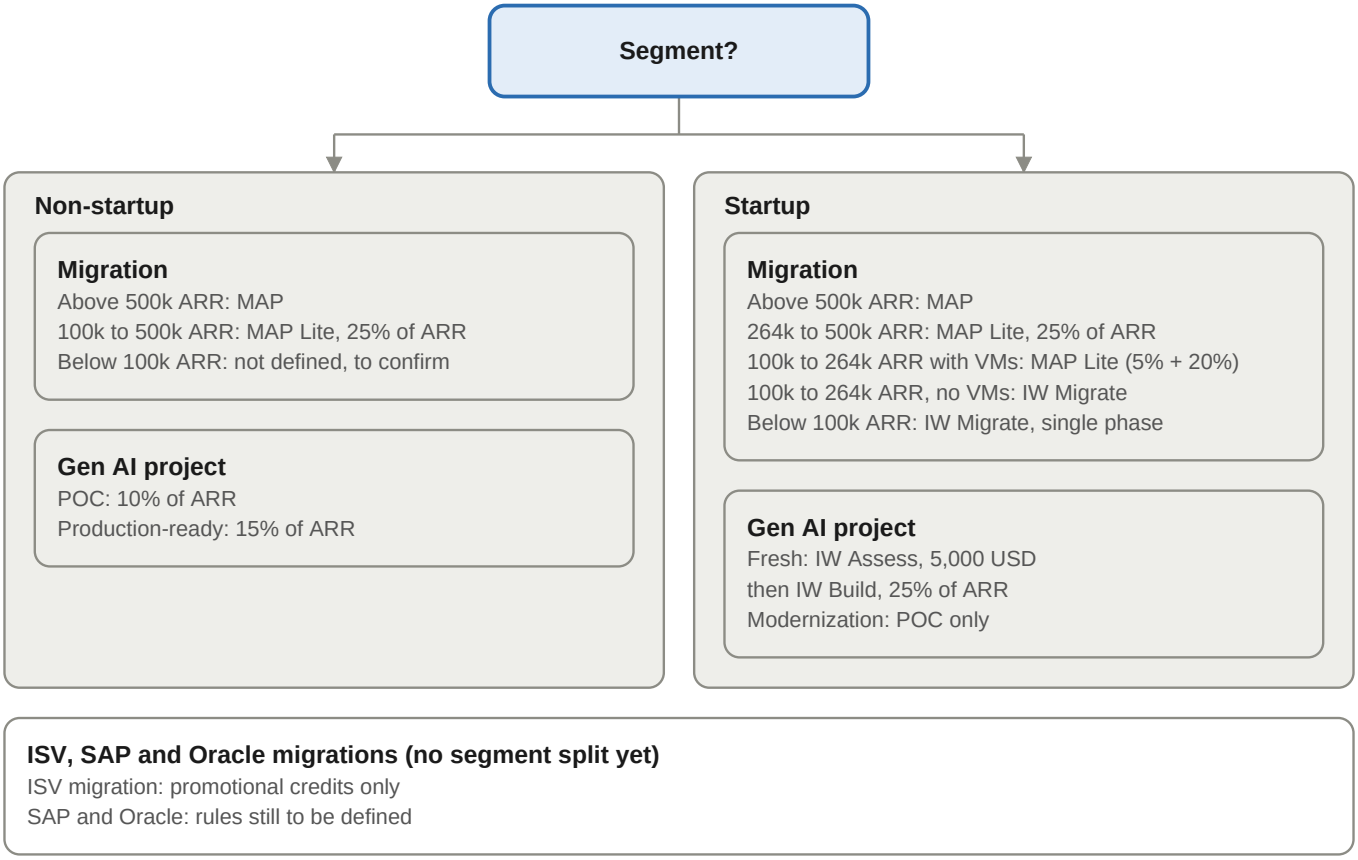
Funding for a customer is decided by three checks, in this order: segment, workload description, then AWS spend. Always validate the description (for example, migration) before looking at spend.

1. Segment: startup, or non-startup (enterprise and others).
2. Workload description: migration, Gen AI, ISV workload migration, SAP or Oracle.
3. AWS spend: convert the monthly run rate (MRR) to annual recurring revenue (ARR) as MRR x 12, then apply the thresholds below.

| Threshold | ARR (USD) | MRR (USD) | Used for |
|---|---|---|---|
| MAP | above 500,000 | above 41,666 | Migrations, both segments |
| IW Migrate ceiling | 264,000 | 22,000 | Startup migrations, single phase |
| MAP Lite floor | above 100,000 | above 8,333 | Migrations from on-premises or any cloud |

## Decision tree

### Segment, then workload, then ARR decide the funding



Funding is decided by segment first, then the workload description, then ARR. ISV, SAP and Oracle migrations have no segment split in the rules yet.

## Migration funding

Migrations above 500,000 USD ARR go to MAP in both segments; below that, startups and non-startups diverge. MAP Lite pays 25% of ARR, split as 5% Assess and 20% Mobilize.

| Segment | ARR (USD) | Condition | Program | Funding |
|---|---|---|---|---|
| Non-startup | above 500k | None | MAP | Per MAP terms |
| Non-startup | 100k to 500k | Migration from on-premises or any cloud | MAP Lite | 25% of ARR |
| Non-startup | below 100k | Not defined in current rules | To confirm | To confirm |
| Startup | above 500k | None | MAP | Per MAP terms |
| Startup | 264k to 500k | None | MAP Lite | 25% of ARR |
| Startup | 100k to 264k | VMs involved | MAP Lite | 5% Assess + 20% Mobilize |
| Startup | 100k to 264k | No VMs | IW Migrate | Single phase, up to 264k, no assessment |
| Startup | below 100k | None | IW Migrate | Single phase, up to 264k, no assessment |

For startups, MAP Lite is the better option above 264k ARR and wherever VMs are involved. IW Migrate (MRR under 22k) is a single phase with no assessment.

## Gen AI funding

Non-startups are funded as a percentage of ARR at two stages; startups are routed by whether the workload is new or an existing one being modernized.

| Segment | Workload | Program | Funding |
|---|---|---|---|
| Non-startup | Proof of concept | POC | 10% of ARR |
| Non-startup | Production-ready | Production funding | 15% of ARR |
| Startup | Fresh workload | IW Assess, then IW Build | 5,000 USD, then 25% of ARR |
| Startup | Modernization or optimization | POC only | POC funding |

Startup Gen AI modernization receives POC funding only. IW Build applies to fresh workloads.

## Special tracks

Three workload types are handled outside the ARR-based rules above.

- ISV workload migration: promotional credits only.
- SAP migration: no rules defined yet.
- Oracle migration: no rules defined yet.
