Meeting notes: Margie's Travel

Date: 9 October 2026 Seller: Arjun Rao (Ingram Micro) Customer: Elena Rossi, VP Digital, Margie's Travel

Summary

Margie's Travel is an online travel agency in Milan with 3 million website visitors a month. They want a generative AI travel assistant on their website and app that can suggest itineraries and answer booking questions in Italian, English and German.

Details

Today the booking platform runs on Azure. The assistant would use Amazon Bedrock and their existing product catalogue of about 40,000 hotels and tours. They want a proof of concept live before the summer season, ideally by April 2027.

They estimate a budget of EUR 80,000 for the first phase. Security review by their CISO is required before any customer data is used. Preferred region: eu-south-1 (Milan).

Action items

Owner	Action	Due
Arjun Rao	Share Bedrock reference architecture	16 Oct 2026
Elena Rossi	Send sample of catalogue data	23 Oct 2026
Aivar	Scope the proof of concept	30 Oct 2026
