Claims intake: current process and FNOL field list

Prepared by Elena Torres (Claims Intake Manager), Fabrikam Insurance, 22 October 2026. Sample data.

Current process (as-is)

- 1. FNOL received by phone (transcribed), e-mail or web form; e-mails are triaged from a shared mailbox.
- 2. Intake agent searches the policy in the policy admin system and opens the policy wording PDF.
- 3. Agent reads attachments and types 32 fields into ClaimCenter (about 14 of the 22 minutes).
- 4. Coverage note written by hand; complex cases referred to a senior adjuster.
- 5. Missing information requested by e-mail from a template (English only today).

Pain points

- 9% of claims need rework; the top causes are wrong policy number (31%), missing loss location (24%) and missing third-party details (19%).
- Storm peaks: up to 1,800 FNOLs per day, a 2-day backlog and overtime for 3 weeks.
- Spanish-speaking claimants (18%) wait longer for follow-ups.

Key FNOL fields (12 of 32)

- Policy number, product line, insured name, claimant name and contact, preferred language
- Loss date and time, loss location (address and geo-code), cause of loss
- Vehicles (VIN, make, model, damage) or property (address, damaged areas)
- Injuries (yes / no, description), police report number, third parties and their insurer

Pilot scope

Auto claims, 40 intake agents, e-mail and web-form FNOLs plus phone transcripts. Home claims follow after the pilot is accepted. Out of scope for the pilot: commercial lines, fraud scoring, payments.
